

Jorge Enciso

Machine Learning Engineer and Machine Learning Performance Engineer

Asunción, Paraguay • jorged.encyso@gmail.com • +595 981 631462 • Github • Linkedin • Medium

Education

Colegio Japonés Paraguayo

High School Diploma, Natural Sciences Track, GPA [10/10], Valedictorian

Asunción, Paraguay

Graduation Date Thesis [Nov 2023]

- Relevant Coursework: Advanced Mathematics, Physics, Mechatronics
- Honors Thesis: “*Niche Modeling with Deep Learning*”
 - Created an automated training pipeline to reconstruct species’ spatial distributions from historical occurrence data.
 - Developed and benchmarked Machine Learning and Deep Learning models for generalized distribution estimation (Neural Networks, Logistic Regression, Naive Bayes, SVM, Random Forest)
 - Three step pseudo-absence generation with unsupervised methods (One-Class SVM, K-means Clustering) [5] implemented from scratch, random and radius based sampling.

Research Experience

Multi-modal modelling for Geophysical Forecasting

MHD-informed Multi-Modal Networks for Geomagnetic Forecasting

Polars, Pandas, Pytorch

October 2023 – May 2024

- Developed Deep Learning architectures for long-term Solar Wind forecasting.
- Engineered Bahdanau-based architectures for satellite time series fusion.
- Integrated MHD constraints as a physics informed cost function.
- Created the concept of "Encoder Forcing", a technique to enforce the calibration of the input data throughout the training process.
- Achieved 96% accuracy, 86% recall, and 93% precision, competing with state-of-the-art.

Computer Vision for Astronomic instrumentation

CorKit: A Framework for LASCO Coronagraph Calibration

OpenCV, Scikit-Image, Pytorch

March 2024 – July 2024

- Developed an alternative pipeline for automated image preprocessing and calibration of solar coronagraph data.
- Implemented the original pipeline [3] from scratch with modern programming languages with extended linear algebra support (Python, C++).
- Created a Multi-Layered UNet-Like Partial Convolutional Neural Network architecture from the foundational Partial CNN work [2] from scratch.
- Increased the reliability of coronagraph scientific products with contextual image inpainting.

Statistical Mechanics informed Neural Networks

Vlasov-Maxwell informed Operator Learning for Solar Wind Modeling

NVIDIA Modulus, Pytorch, Polars, Pandas

October 2024 – Ongoing

- Modeled solar wind’s electron’s anisotropic behavior using physics-informed machine learning.
- Implemented Deep Neural Networks, Recurrent Neural Networks, and Neural Operators to replicate electron’s probability density function.
- Unveiled reliable data-driven distributions for an obscure area in Plasma Physics.

Machine Learning for Celestial Mechanics

PINNs for Celestial Mechanics: The Family of N-body problems

NVIDIA Modulus, Pytorch, Numpy

December 2024 – Ongoing

- Modeled gravitational interactions between celestial bodies with Physics informed Neural Networks [4].
- Enforced hamiltonian constraints of the N-Free body problem and its variations (Euler, Lagrange) using Lagrangian optimization and symplectic integrators.
- Presented PINNs as an alternative to reliably study celestial mechanics without overly complex numerical methods.

Specialized Projects

LighTorch – Deep Learning Framework

Personal ML Framework Project

Lightning, Pytorch, Optuna, CUDA C++
2024 – Ongoing

- Wrapper over the Pytorch Lightning and plain Pytorch backends.
- Abstractions for supervised, self-supervised, and adversarial training.
- Multi-Objective optimization for Hyperparameter tuning with Optuna.
- More than 20 modules extending novel architectures, including the Partial Convolutions [2], Fourier Layers (including deconvolutions) [8], among others.
- Implemented additional architectures from scratch: Rotary Positional Encoding [7]; RMS Norm [9]; GLU Variants [6]; Multi Query Attention, Grouped Query Attention & Multi Head Attention [1].
- In progress: Low level optimizations for non-standard modules.

Fusion – IO-Aware Kernelized Training Compiler

In Development

CUDA, C++, Pytorch
2024 - Ongoing

- Design a programming language syntactically parallel as a machine learning standard.
- Create a new version of the forward-backward standard that exploits IO operation latency.
- Features include stream-aware optimization, prefetching graphs for latency hiding, and compatibility with state-of-the-art frameworks.

Fourier is All You Need & Fourier Variational Autoencoders

Machine Learning Architecture

CUDA, C++, Pytorch
2024

- Exploited mathematical properties of the Fourier Transform to accelerate Convolutional Neural Networks.
- Investigated the properties of the Fourier space in training scenarios.
- Designed UNet-Like variations for the Fourier Layer case [8] (implemented from scratch).
- Created a Fourier Layer alternative for UNet-Like autoencoders: Fourier Deconvolutional Layer.

Miscellaneous Projects

Rapid Eye Movement Detection

Sleeping stages classification

Pytorch, Pandas, Numpy, Scikit-Learn
2023

- Implemented Recurrent Neural Networks to classify sleeping stages.
- Achieved state-of-the-art classification with 97% F1 Score (Residual GRU model).
- Deep Recurrent Neural Networks and Attention-based architectures.

SADI A.I.

Security AI

Pytorch, OpenCV
2023

- Developed foundational models to classify and recognize threats.
- Trained state-of-the-art Computer Vision models (YOLO, YOLO-NAS).
- Real-Time face detection, threat detection, face recognition, and individual detection.

Sketcher A.I.

Art AI

Pytorch, OpenCV
2023

- Created foundational pipeline to create sketches from images.
- Implemented state-of-the-art style-transfer mechanisms.

Awards & Recognitions

- Silver Medal – National Math Olympiad (8th/9th Division), Paraguay, 2020
- Bronze Medal – National Math Olympiad (10th/11th/12th Division), Paraguay, 2021
- Gold Medal – Regional Physics Olympiad (Advanced Level), Paraguay, 2022
- Silver Medal – National Physics Olympiad (Intermediate Level), Paraguay, 2022
- National Delegate – Ibero-American Physics Olympiad, 2022
- Honorable Mention – NASA Space Apps Challenge Paraguay, 2023
- 2nd Place in Technology – Marie Curie National Science Fair, 2023
- 2nd Place - 1st National Stratospheric Platforms Contest, 2023

Experience

DDS.py Asuncion, Paraguay July 2023 – December 2024

- Taught foundational programming (Python) and ML concepts to high school students.
- Developed and maintained an alternative learning roadmap on GitHub.
- An introductory to advance course on deep learning, and an introduction to ML performance engineering.

Mechatronics Teacher Asuncion, Paraguay March 2024 – November 2024

- General purpose programming (C++, Python) lectures for High School students.
- Taught Networking (OSI Model, TCP/UDP communication), Astronomy software design patterns (NASA Software Engineering book), serial protocols (USB, I^2C , etc).
- Taught programming paradigms: Object Oriented Programming (OOP) and Functional programming.

Physics Teacher Asuncion, Paraguay March 2023 – November 2024

- Taught lectures on classical mechanics and electromagnetism for physics olympiads.

Oym Systems Group S.A. Asuncion, Paraguay
ML & Devops Engineer - Research Team July 2024 – Ongoing

- Develop cloud infrastructure pipelines for ERP software scalability.
- Created LLM pipelines with Retrieval Augmented Generation (RAG) and Low Rank Adaptation (LoRA) for fine-tuning.
- Refactoring monolithic architectures into dockerized microservices.
- Implemented Kubernetes Operators for horizontal and vertical scalability.
- Proposed Continuous Integration and Deployment Git operations.

Tigo - Telecel - Milicom Asuncion, Paraguay
Machine Learning Engineer & AI Specialist June 2025 – Ongoing

- Develop cloud infrastructure pipelines for monitoring, security, and deployment of LLMs.
- Finetuned 8B quantized experts on consumer-grade hardware for Agentic pipelines.
- Implemented brokers for Model Context Protocol (MCP) targeting GitLab, Gmail. TODOOO
- Implemented integrated RAG pipelines with the OpenTest framework (open source functional testing).
- Worked as a consultant for various AI applications.

Certifications

- **Stanford University: Machine Learning**
- **IBM AI Engineernig**
- **Jovian: Zero to GANs with Pytorch**
- **Duoling English Test**

Skills

Languages: Spanish (Native), English (Fluent), Japanese (Basic)

Programming: C++, CUDA C++, PTX ISA, Python, Rust, Bash, Lua, Nix

Scientific: Deep Learning, Numerical Optimization, Compiler Design, Geospatial ML, Remote Sensing, Data Fusion

ML Tools: CuDNN, CUDA Toolkit, Tensor RT, Triton, PyTorch, Lightning, NVIDIA Modulus, Scikit-learn, Transformers, Langchain, vLLM, NVIDIA NeMo

Data Tools: Pandas, Polars, Matplotlib, Seaborn, PySpark, cudf, SQL, Milvus

Devops & MLops: Docker, Istio (Service mesh), Nginx, Helm, Kubernetes, Argo CD, NVIDIA NIM, Prometheus, Grafana, Tensorboard, Hydra
